Location	Swansea, Wales
No of yrs of exp reqd	8 + Years

CLIENT

Our client

A leading global technology service provider. It offers services, including application development and maintenance, infrastructure management, and business process management.

End client

A UK government organisation responsible for maintaining a database of drivers in Great Britain and a database of vehicles for the entire United Kingdom.

Business Challenge of the client

The client had 2 consultants backing out after accepting the role, thus it was imperative to source a good fit immediately in order to not to jeopardise its relationship with its end customer. The urgency was visible from multiple requests being raised in a span of few days to fulfill this position.

Challenges faced in fulfilling this role

- 1) To find a candidate with experience in Ruby or Cucumber at a lower rate for the remote location.
- 2) To find local candidate who could join immediately.
- 3) After trying all the locals, we tried touching consultants outside Swansea, Wales.
- 4) Candidate was required to have BPSS clearance, which was the biggest challenge in this case.

What is unique and challenging about this closure

Despite numerous challenges and constraints in finding the right-fit for this role, we could turnaround this closure as per our client's expectations.
