## CLIENT

### Our client

A global Fortune 500 technology services provider with clients in in Travel & Transportation, Banking & Financial Services, Insurance and various other industries.

### End client

A UK government organisation responsible for maintaining a database of drivers in Great Britain and a database of vehicles for the entire United Kingdom.

### Business Challenge of the client

This was business critical role for our client as their end customer was a government organisation where there was urgent need for SDET with Ruby & Cucumber.

### Challenges faced in fulfilling this role

The location was quite challenging. The rate for this project was very competitive, due to budget constraints in the public sector. Moreover we had to look for the candidates who must have the mandatory skills on Ruby and Cucumber.

### What is unique and challenging about this closure

To find a SDET resource on a very competitive rate was hard to find but somehow we managed to closed this role within a day. To add, the consultant we found had the perfect skillset, much to the pleasure of our client.
