Case Study: Data Architect\_London

## CLIENT

### Our client

A leading global IT solutions provider covering BFS, insurance, and travel and transportation verticals. It offers services including application development and maintenance, infrastructure management, and business process management.

### End client

A multinational insurance holding company. It is the largest property/casualty insurance group in Japan

### Business Challenge of the client

This role was critical for our client. Our client's customer had its own project delivery deadlines and was very specific about the consultant they wanted to engage with.

### Challenges faced in fulfilling this role

Sourcing, rightly skilled Data Architect with desired level of experience, at average pay rate was a big challenge. Extensive experience in Property & Casualty (P&C) insurance was required. Also joining timeline had to be no more than 2 weeks. We had shared many profiles for this position before closing on Rajesh

### What is unique and challenging about this closure

Sourcing methodology had to be tweaked a bit due to nature of role and its urgency. LinkedIn recruiter licence that we have as one of our premium sourcing tool, came in handy and was extremely useful .
